

# Colour Resemblances 1.3

Arrange the colour samples into six groups according to the attribute that is the most dominant (the main attribute): whiteness, blackness, yellowness, redness, blueness and greenness. In each group there is one colour

sample that is 'pure', e.g. pure white (W) or pure red (R) (elementary colours). Mount these in their allocated places. All other colours in a group are related to some of the other elementary colours (sub-attributes). Mount these colours so

as to build the first step in a scale towards the elementary colour to which it is related (according to the arrows). E.g. mount the yellow colour that is reddish among the yellow colours in the square with an arrow pointing towards red.
